

Note of Recommended Player and Format for VX855 Video Playback

EPIA mainboards integrated with VIA VX855 MSP offer the feature of video hardware acceleration to allow smooth playback of the widest variety of leading video standards including H.264, MPEG2, and WMV9/VC1. The advanced video acceleration capabilities, when coupled with Microsoft Media Player and Cyberlink PowerDVD player, open up exciting opportunities for true 1080p HD video playback.

Chipset	OS	VGA Driver	Video Playback	Player
VX855	Windows XP	S3gigp.dll 6.14.10.0280-20.12.01j	WMV9/VC1	Microsoft Media Player 11 http://www.microsoft.com/windows/windowsmedia/player/11/default.aspx
			H.264/MPEG2	CyberLink PDVD7 http://download.cyberlink.com/ftpdload/trial/msi_pdvd_trial.exe
	Windows 7	V8.14.14.0071-24.12.01e	H.264/MPEG2/WMV9/VC1	Microsoft Media Player 12
				Built in Windows 7
				CyberLink PDVD9 v2201
				http://www.9down.com/CyberLink-PowerDVD-v9-2201-258612/

- Contact Cyberlink's representative for further details and documentation of PowerDVD.

Accelerated Video Format				
Video Standard	Profile	Level	Maximum Bit rate	Resolutions by Framerate
MPEG2	Main	High	40 Mbit/s	1920 x 1080 / 30
H.264	Main	L4	15 Mbit/s	1920 x 1080 / 30
WMV9/VC1	Advanced	L1	10 Mbit/s	720 x 480 / 30 (NTSC-SD)
				720 x 576 / 25 (PAL-SD)

- The above material only supplies the reference, the actual performance should take VIA interior test result as a standard.
- The capability of video playback is related to the computing power of CPU.
