1. Introduction

1.1. Overview

The purpose of this Evaluation Guide is to help you get started with Android Evaluation Kit (EVK) for **ALTA DS 2 platform**.

This covers the topics such as:

- Creating your booting media and flash a new Android firmware / OS image onto your system
- Modifying the boot parameters to fit the case you use

1.2. Package Content

The ALTA DS 2 Android Evaluation Kit can be downloaded from the VIA Embedded website, it contains the following components:

EVK (Evaluation Kit): The binary package includes eloader, U-Boot, Kernel, Android and firmware installation package.

EVK	
FirmwareInstall	<p>Firmware installer used to upgrade the firmware for the target device. Including the below binary files under bspinst folder:</p> <ul style="list-style-type: none">● ELoader: Primary boot loader used to initialize the hardware.● U-Boot: Second boot loader used to initialize the hardware and boot from the operation system.● Kernel: Linux kernel used to provide system program services and manage hardware and software resources.● Android: A mobile operating system based on the Linux kernel and developed by Google.

2. Making Android System Booting Media

This chapter describes how to install the firmware for ALTA DS 2. Users could follow the procedure described in section 2.1 below for installing the firmware provided by the EVK software package.

2.1. Requirements

- Linux development computer
- SD storage card
- EVK package
 - Elite1000 Android4.4.2 EVK*.tgz (Support ext4 SD)
 - Elite1000 Android4.4.2 FirmwareInstall vfat bspinst*.tgz (Support vfat SD)

**Note:**

1. To get more installation process about the vfat EVK installation package, please refer to Appendix B.

2.2. EVK Installation Package

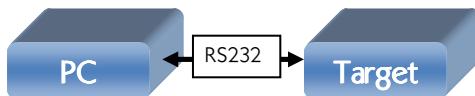

The up-to-date firmware is included in the latest EVK package which could be downloaded from VIA Embedded Website. Users can follow the steps to install the firmware package which is supported in ext4 formatted SD storage card for evaluation from EVK without building the BSP directly.

Step 1: Prepare a SD storage card with ext4 formatted.

Step 2: Copy firmware package from /EVK/FirmwareInstall/*.* to SD storage card root directory. Users can check content in the SD storage card when finish copying the files.

```
#The mount path of SD storage for this example is /mnt/tmp1  
user@ubuntu:~$ ls /mnt/tmp1  
bspinst _EXT4_SD_CARD_ONLY_ scriptcmd
```

Step 3: The recommend connection of debug port between device and Linux host computer is shown in Figure 1 . The target device for this example is ALTA DS 2.

```
#Setting in Terminal AP, ex:Putty  
Baud Rate: 115200  
Data: 8 bit  
Parity: none  
Stop: 1 bit  
Flow control: none
```

Figure 1 Debug port connection and setting

The U-Boot will wait 3 seconds to stop booting after powering on by pressing any key. When booting is stopped, that prompt sign will show up on terminal screen. Users can skip to access U-Boot setting if nothing needs to be changed.

```
#The booting message for this example is ALTA DS 2

```

Step 4: Insert the SD storage card to the target device and power it on. The installation will be executed automatically as shown in Figure 2~Figure 3.

Step 5: Remove the SD storage card when the message “Please remove installation media” pops up, as shown in Figure 4. The device will reboot automatically and boot up Android.

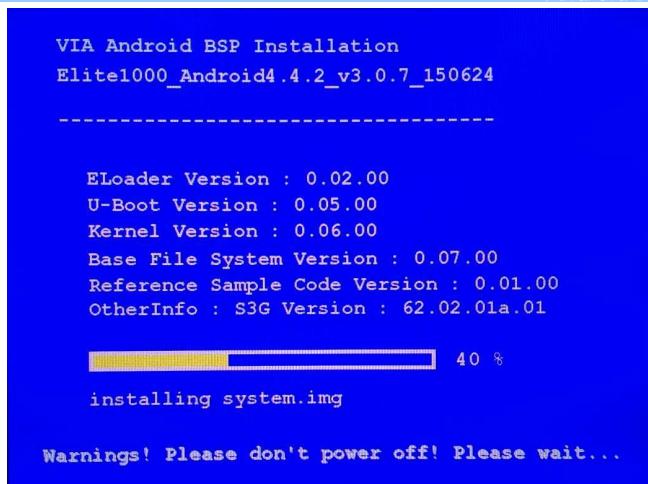

Figure 2 Installation progressing

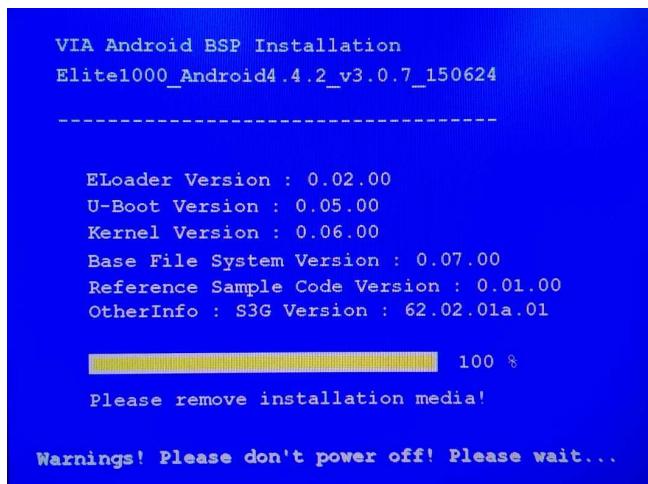

Figure 3 Finish installing and message pops up

Figure 4 Finish installing and reboot count down procedure

2.3. Updating the Firmware Package

For information on updating the firmware package, please refer to the ALTA DS 2 Android Development Guide! It is available from the ALTA DS 2 product page on the VIA Embedded website, it is also included in the ALTA DS 2 Android Board Support Package (BSP).

3. Functionality

ALTA DS 2 is designed with enhanced features including UART and Watchdog Timer support. These Functions can be controlled by Smart ETK Tool under Android Environment. For more details about Smart ETK, please refer to **Android Smart ETK SDK Programming Guide.pdf** in the **"Document"** Folder and install the same APK from **/EVK/Tools/SmartETK** for evaluation directly.

4. Platform Specific Setting

4.1. Setting Split/Clone Mode through S3 PCD Editor

The supported ALTA DS 2 device is listed below.

- ALTA DS 2 2GB RAM SKU

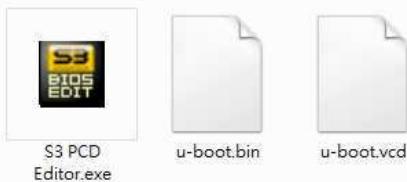

To enable the Split/Clone Mode Support in ALTA DS 2, VIA provides an Editor Tool to enable HDMI2 output.

4.1.1. Preparation

The S3 PCD Editor Tool was located in the "TestTool" Folder and named as "S3 PCD Editor.exe". It is a Windows-Based Execution File and needs to be used under Windows OS. To use the S3 PCD Editor, the following items need to be prepared for S3 PCD Editor Reference:

1. Target U-Boot Binary File
2. The "u-boot.vcd" file which corresponds to Target U-Boot Binary
3. S3 PCD Editor.exe

Items (1) and (2) will be generated in the root folder of U-Boot Source Code after compiling the U-Boot. Please refer to "Build U-Boot" section for more details.

4.1.2. Setting Strategy

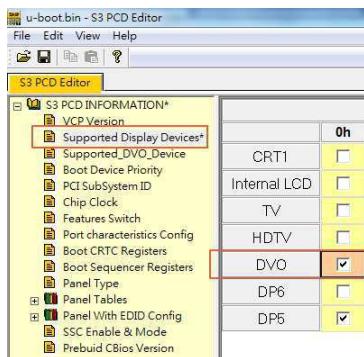

Follow the steps:

1. Execute the "S3 PCD Editor.exe" and open the "u-boot.bin" of the Target U-Boot Binary.

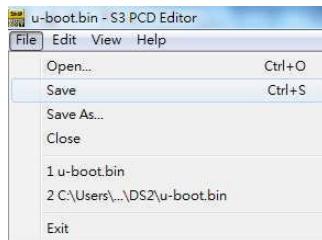

Make sure the corresponding "u-boot.vcd" is located in the same folder.

2. Select the "Supported Display Devices" Menu and enable the "DVO" to support HDMI 2 output.

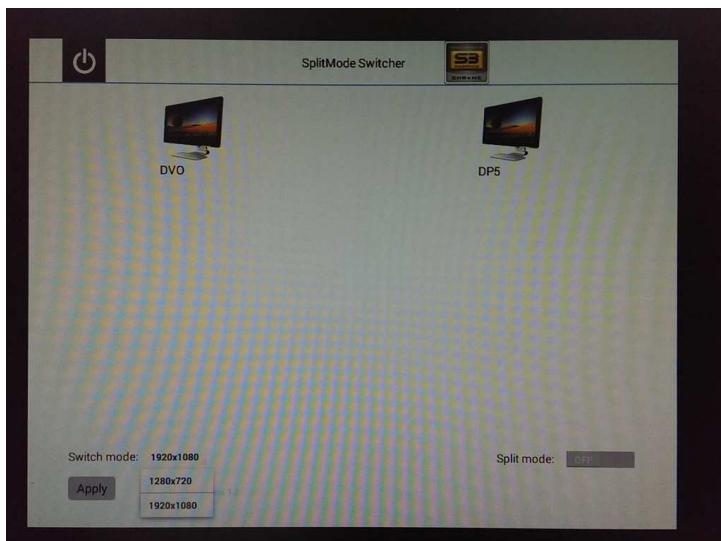

3. Be sure to "Save" the Setting after exiting the S3 PCD Editor.

4. Copy the modified u-boot.bin to the /bspinst/u-boot.bin to update U-Boot. Please refer to Chapter 4 for more details.
5. To set Split/Clone Mode under Android OS:

Setting->Display

Reboot is required in order to apply Mode switch.

Appendix A. Definitions

Android	Android is a trademark of Google Inc.
ARM	ARM is a trademark of ARM Inc.
BSP	Board Support Package
HDMI	High Definition Multimedia Interface
SD	Secure Digital Multimedia Card
Micro SD	Micro Size Secure Digital Multimedia Card

VIA	VIA Technologies, Inc.

Appendix B. EVK Installation

Package through vfat SD

B.1. Requirements

- Linux development computer
- SD storage card
- EVK package
 - Elite1000 Android4.4.2 FirmwareInstall_vfat_bspinst*.tgz
(Support vfat SD)

B.2. EVK Installation Package

Step 1: Prepare a SD storage card with vfat formatted.

Step 2: Copy firmware package from /EVK/FirmwareInstall_vfat_bspinst/*.* to SD storage card root directory.

Step 3: Connect debug port between device and Linux host computer.

Step 4: Insert the SD storage card to the target device and power it on. Press any key to access the U-Boot setting.

Step 5: Modify U-Boot parameter

```
# Modify U-Boot parameter to set fat booting.  
  
setenv bootcmd 'emmc format;run bootargs_mmc; fatload mmc 0:1 0x0  
scriptcmd; if iminfo 0x0; then source 0; else run bootcmd_mmc; fi'  
  
setenv bootcmd_default 'run bootargs_mmc; fatload mmc 0:1 0x0 scriptcmd;  
if iminfo 0x0; then source 0; else run bootcmd_mmc; fi'  
  
setenv bootcmd_mmc 'run bootargs_mmc && fatload mmc 0:1 0x6000000  
bspinst/elite1000-emmc.dtb; fatload mmc 0:1 0x2800000 bspinst/uImage; if  
iminfo 0x2800000; then bootm 0x2800000 - 0x6000000; else run bootcmd_emmc;
```

```
fi'  
  
setenv nand_setup 'fatload mmc 0:1 0x2000000 bspinst/boot_script.uimg;  
source 0x2000000'  
  
setenv setup_bootloader 'fatload mmc 0:1 0x1000  
bspinst/bootloader_setup.uimg; source 0x1000;'  
  
setenv setup_emmc 'fatload mmc 0:1 0x1000 bspinst/bootloader_setup.uimg;  
source 0x1000; fatload mmc 0:1 0x1000 bspinst/uboot_emmc_setup.uimg;  
source 0x1000;'  
  
setenv setup_nand 'fatload mmc 0:1 0x1000 bspinst/bootloader_setup.uimg;  
source 0x1000; fatload mmc 0:1 0x1000 bspinst/uboot_nand_setup.uimg;  
source 0x1000;'  
  
setenv setup_img 'fatload mmc 0:1 0x1000 bspinst/img_setup.uimg; source  
0x1000;'  
  
setenv setup_bootloader 'fatload mmc 0:1 0x1000  
bspinst/bootloader_setup.uimg\; source 0x1000\;'  
  
setenv bootcmd_mmc 'run bootargs_mmc && fatload mmc 0:1 0x6000000  
bspinst/elite1000-emmc.dtb\; fatload mmc 0:1 0x2800000 bspinst/uImage\;  
bootm 0x2800000 - 0x6000000\;'
```

```
# Boot up after setting.
```

```
boot
```

Step 6: Installation will be executed automatically.

Step 7: Remove the SD storage card when the message "Please remove installation media" is shown. The device will reboot automatically and bootup Android.

Appendix C. Troubleshooting

C.1. Fail to update the Firmware automatically

If it cannot be updated automatically after powering on, users can type the command below in U-Boot to update the firmware manually.

```
ext4load mmc 0:1 0 scriptcmd; source 0  
(please press any key on normal boot)  
press any key to abort fastboot!  
fbt_preboot: request for a normal boot  
Hit any key to stop autoboot:  0
